Meeting Oct 27, 2025 at 15:09 CET

Meeting records  Recording

Summary

Clément Lacaille confirmed N8 platform access with Cecilia Mwaniki and Chinedu Kirian Onwuzuruike, while Claudia dci_fbw_aws_ce_24_e05 did not have access. Chinedu Kirian Onwuzuruike volunteered to share their screen to co-build a "market research AI agent" workflow on the N8 platform, which was outlined in a Google Docs file named "group five project." The team, including Chinedu Kirian Onwuzuruike, Ikenna lyke Jude Mmadunwobi, Cecilia Mwaniki, and Louise Ndafudha Naayole Ludwig, collaborated to answer clarifying questions from Plexity regarding the AI agent's functionality for researching kids' clothes in Germany, and began setting up the N8N workflow, troubleshooting access issues with the help of Louise Ndafudha Naayole Ludwig. The main talking points were accessing the N8 platform, volunteering for screen sharing, Google document setup, defining the market research AI agent goal, outlining manual research steps, prompting for workflow creation, addressing clarifying questions from Plexity, answering Plexity's questions, setting up the N8N workflow, accessing N8N and troubleshooting, workflow creation steps, identifying the next node, certificate and course completion, accessing course materials, and troubleshooting N8N access for Ikenna lyke Jude Mmadunwobi.

Details

Notes Length: Standard

- **Access to N8 Platform** Clément Lacaille checked with the class participants about their access to the N8 platform. Cecilia Mwaniki and Chinedu Kirian Onwuzuruike confirmed they had access, while Claudia dci_fbw_aws_ce_24_e05 stated they did not. Clément Lacaille acknowledged this and planned to guide those without access.
- **Volunteer for Screen Sharing** Clément Lacaille requested a volunteer from Cecilia Mwaniki, Chinedu Kirian Onwuzuruike, or Claudia dci_fbw_aws_ce_24_e05 to share their screen and co-build a workflow, similar to past activities. Chinedu Kirian Onwuzuruike volunteered despite potential connection issues, and Clément Lacaille emphasized the importance of student-led learning in this final week.
- **Google Document Setup** Clément Lacaille instructed Chinedu Kirian Onwuzuruike to open a Google Docs file and name it "group five project". This document would be used to outline the steps for their project.
- **Market Research AI Agent Goal** The primary goal for the week's project was defined as building a "market research AI agent" on the N8 platform. Clément Lacaille specified that this agent would automate competitor research in a particular product category using publicly available information like news, YouTube videos, and other online sources. The example given was researching competitors for a new kids' clothes company in Germany to understand their market differentiation, USP, and marketing strategies.
- **Manual Research Steps** Before discussing AI, Clément Lacaille prompted the group to outline the steps for conducting market research manually. The agreed-upon steps included: planning the research, searching for company names, identifying sources of information, extracting data from those sources, and analyzing and summarizing the information to create a report.
- **Prompting for Workflow Creation** Chinedu Kirian Onwuzuruike was instructed to download the Google document as a PDF and upload it to "Plexity" to start a new chat. Clément Lacaille then provided a detailed prompt for Chinedu Kirian Onwuzuruike to input into Plexity, requesting a workflow plan that identifies companies, sources information, extracts data, and summarizes it, asking for clarifying questions before generating a response.
- **Addressing Clarifying Questions from Plexity** After Clément Lacaille left the group to check on other teams, the AI asked several clarifying questions. The group, including Chinedu Kirian Onwuzuruike, Ikenna Iyke Jude Mmadunwobi,

Cecilia Mwaniki, and Louise Ndafudha Naayole Ludwig, discussed how to answer these questions, with some initial confusion.

- **Answering Plexity's Questions** Upon Clément Lacaille's return, the group collaborated to answer Plexity's questions. They specified the product category as "kids' clothes in Germany," chose for the agent to dynamically search web sources for company identification, and opted to include all publicly available information as sources. For the output summary, they decided on a PDF format, and the input would be provided within N8. They confirmed existing access to Plexity and OpenAI but lacked Tavily access. Finally, they defined the desired report content to include a company overview, financial metrics, distribution methods, customer identification, and other relevant details.
- **Setting up N8N Workflow** Clément Lacaille guided the team, including Chinedu Kirian Onwuzuruike, Cecilia Mwaniki, and Ikenna lyke Jude Mmadunwobi, on building a workflow in N8N. They emphasized the need to follow steps one at a time and suggested opening N8N, creating a new workflow, and trying to follow the instructions given. They also clarified that they expected the team to engage with a "publicity" tool like Gemini, to ask for the next steps in the workflow, and to try it out and give feedback.
- **Accessing N8N and Troubleshooting** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike encountered issues accessing N8N, with Cecilia Mwaniki noting that they needed Clement's password for Google Sheets, while Chinedu Kirian Onwuzuruike accidentally closed their N8N instance. Louise Ndafudha Naayole Ludwig provided assistance with N8N access, suggesting looking for the N8N document in Windows and guiding them through reopening the platform.
- **Workflow Creation Steps** The team collaboratively worked on the initial steps of creating a new workflow in N8N. Louise Ndafudha Naayole Ludwig and Chinedu Kirian Onwuzuruike guided Cecilia Mwaniki on clicking "create new workflow" and then searching for a trigger node. Ikenna lyke Jude Mmadunwobi suggested that the "next step is to Add your first node to your workflow" and provided instructions for locating the "start node" on the blank canvas.
- **Identifying the Next Node** The discussion then shifted to identifying the next node to add after the trigger or start node. Ikenna lyke Jude Mmadunwobi, after consulting "publicity," suggested the "next node is where you tell which product category you want to search for". They also provided instructions to "Type input

in the search box that appears" and pick a node called "set" to create a field called "product category".

- **Clément Lacaille's Departure and Follow-up** Clément Lacaille announced that they would be leaving the meeting shortly but encouraged the team to continue working on the workflow. They offered to connect with individuals like Louise Ndafudha Naayole Ludwig and Chinedu Kirian Onwuzuruike individually the next day to address specific workflow challenges.
- **Certificate and Course Completion** Chinedu Kirian Onwuzuruike inquired about not receiving their Week 2 certificate, to which Clément Lacaille advised them to leave a message in the Slack group and confirmed that completing four projects by the end of four weeks is the requirement for the certificate. Cecilia Mwaniki also asked if watching videos from the start of the lessons would grant them a certificate, and Clément Lacaille reiterated that proof of built projects and filling out a Google form are necessary.
- **Accessing Course Materials** Ikenna lyke Jude Mmadunwobi expressed the need to watch videos to understand the N8N setup better. Clément Lacaille directed them to a Google Drive folder containing classroom materials, including week 2 day 1 recordings for N8N setup and API keys. Louise Ndafudha Naayole Ludwig further guided Ikenna lyke Jude Mmadunwobi on how to access the API keys and log into the N8N website.
- **Troubleshooting N8N Access for Ikenna lyke Jude Mmadunwobi** Ikenna lyke Jude Mmadunwobi faced difficulties copying the N8N link and logging in due to laptop issues. Louise Ndafudha Naayole Ludwig provided verbal instructions to manually type in the email and password for N8N access, ensuring they did not copy and paste the credentials.

Suggested next steps

- ☐ Clément Lacaille will check with the other teams in breakout rooms for five minutes.
- ☐ Clément Lacaille will connect with Louise Ndafudha Naayole Ludwig tomorrow after the class to look at Louise Ndafudha Naayole Ludwig's work on N8N, which is stuck on week two and not showing job offers.

- ☐ Clément Lacaille will join early or stay late tomorrow to help Louise Ndafudha Naayole Ludwig and Chinedu Kirian Onwuzuruike figure out the workflow.
- ☐ The group will fix a time, either before or after the class, by texting Clément Lacaille directly on Slack to get help with the workflow.
- ☐ Chinedu Kirian Onwuzuruike will leave a message in the Slack group about the missing week two certificate.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

Please provide feedback about using Gemini to take notes in a [short survey](#).
