

Oct 28, 2025

Meeting Oct 28, 2025 at 15:43 CET

Meeting records  Recording

Summary

Sven Lück presented a daily personalized newspaper workflow, which involves gathering news from RSS feeds, using an AI agent for evidence checking, and sending a daily, personalized newspaper to Slack. Sara Hofmann's group is developing a job search workflow using N8N that integrates with LinkedIn to search for new jobs based on a schedule; however, Clément Lacaille raised concerns about the high cost of the LinkedIn Business API, and Sven Lück warned about LinkedIn's data scraping policies. Hana Abrham Tekle's group is developing a workflow to provide daily weather information and warnings via Telegram, while Kai Feldhoff and Murphy Odion Usunobun are building a Telegram chatbot that provides company information from a support document database. Chinedu Kirian Onwuzuruike's group is automating competitor research for specific product categories using AI to summarize and analyze market insights, and they successfully configured the set node and integrated the Perplexity node with an API key, resolving connection issues with Cecilia Mwaniki.

Details

Notes Length: Standard

- **Daily Personalized Newspaper Workflow** Sven Lück outlined a workflow for creating a daily personalized newspaper. This system involves using a sheet with RSS feed URLs, a feed reader that gathers news from the last day, and an AI agent that checks for evidence using a message model in Perplexity. The goal is

to send a daily, personalized newspaper to Slack, which is currently not implemented but is planned for today.

- **Workflow Clarification and Benefits** Murphy Odion Usunobun requested clarification on the workflow's purpose. Sven Lück explained that users provide an RSS feed URL, and the system sends a summarized daily news report to their Slack channel, checked for evidence, allowing users to stay updated without purchasing a newspaper or checking other channels.
- **Workflow Challenges and Learnings** Sven Lück identified the integration of the Slack API as the most significant upcoming challenge for their group, noting its difficulty based on previous experience. They also mentioned that finding a project suitable for all participants, given their differing skill levels, was the most challenging part initially, while the N8N workflow itself was relatively straightforward. Additionally, the team needs to decide on the format and storage method for the data, potentially considering a database.
- **Job Search Workflow Development** Sara Hofmann's group is developing a job search workflow using N8N, intended to be more specific and comprehensive than a previous version from week two. The workflow will integrate with LinkedIn to search for new jobs based on a schedule, such as daily at 5 PM or 8 PM.
- **LinkedIn Integration Concerns** Clément Lacaille raised concerns about integrating with LinkedIn, specifically regarding the cost of the LinkedIn Business API, which is typically expensive. Sven Lück confirmed that using the LinkedIn Business API could cost at least \$70 per month. Clément suggested alternative methods like scraping data from Google search results for marketing jobs or utilizing Gmail API to extract job alerts sent to email.
- **Data Scraping Policy and Legal Implications** Sven Lück advised Sara Hofmann to be cautious when scraping data from LinkedIn, as it goes against their policies and could lead to an account ban. They explained that LinkedIn closed their APIs for monetization reasons and to prevent others from scraping data. Naweed Zahed acknowledged the importance of checking data protection and other policies to avoid conflicts.
- **Weather Information Workflow** Hana Abrham Tekle's group is developing a workflow to provide daily weather information at 7 AM. This workflow will also send warnings via Telegram if extreme temperatures or rain are predicted, and it can answer real-time weather inquiries. Sven Lück inquired if this was a "human

in the loop" workflow, but Hana clarified it automatically sends information and warnings without requiring human input for continuous updates.

- **Company Chatbot Development** Kai Feldhoff and Murphy Odion Usunobun are building a Telegram chatbot that provides information about a company. The AI-powered chatbot will access a support document database, likely a vector data database, to answer user questions about the company via text. The team is still deciding on the specific "fake company" for which they will create documents.
- **Automated Competitor Research Workflow** Chinedu Kirian Onwuzuruike described their group's workflow to automate competitor research for specific product categories, such as electric scooters or organic creams. This workflow will use news, YouTube videos, and other online sources to identify top companies, collect and aggregate relevant content into structured data, and use AI to summarize and analyze market insights. The expected outcome is a fully automated, AI-analyzed competitor report that saves time and provides actionable insights.
- **Workflow Building Progress and Challenges (Group 5)** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike, along with new members, worked on building their workflow, specifically for a kids' clothing company in Germany, aiming to research competitors. They faced difficulties locating and implementing the "set node" as instructed by the AI, leading to a temporary halt in their progress. Cecilia attempted to guide Mohammed Abugeth and Mariem Ghali through the N8N login process, sharing credentials.
- **Configuring the Set Node** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike worked on configuring the set node, ensuring the "brief" field was correctly typed with a lowercase 'b'. They successfully copied and pasted the research instruction into the value box and executed the node, confirming its functionality. Ikenna lyke Jude Mmadunwobi noted they were observing and would catch up later.
- **Perplexity Node Integration and API Key Configuration** The team proceeded to add a Perplexity node, which required an API key from a Perplexity account. Cecilia Mwaniki and Chinedu Kirian Onwuzuruike encountered difficulties with the API key, trying different keys from a sheet and troubleshooting connection issues. Chinedu Kirian Onwuzuruike eventually confirmed their connection worked, suggesting Cecilia Mwaniki try a different API key.

- Troubleshooting Perplexity Node Connection** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike continued to troubleshoot the Perplexity node connection. They attempted to connect the Perplexity account, and Chinedu Kirian Onwuzuruike advised Cecilia Mwaniki to ensure a green connection indicator appeared. They opted not to rename the account to avoid potential API issues.
- Connecting Brief to Perplexity Node** Chinedu Kirian Onwuzuruike guided Cecilia Mwaniki to change the role in the Perplexity node from "user" to "system" and drag the "brief" variable into the text field. They discussed potential next steps, including adding another message node, but decided to follow the Perplexity steps first.
- Executing the Workflow and Output** After attempting to execute the workflow, Chinedu Kirian Onwuzuruike suggested dragging the "resume" variable into the user's text field before executing, which successfully ran the nodes. Cecilia Mwaniki confirmed the nodes executed, and the team concluded that the initial task was complete, with the Perplexity node displaying the model's response.
- Workflow Output Format and Future Tasks** Cecilia Mwaniki inquired about the output format, asking if it would be a PDF. Chinedu Kirian Onwuzuruike believed it should be a PDF and suggested asking Clément Lacaille about downloading it. They also discussed that they had completed the current steps and anticipated new tasks, potentially involving other nodes like OpenAI.
- Internet Connectivity Issues** Chinedu Kirian Onwuzuruike mentioned ongoing internet connectivity issues, attributing it to their location. Ikenna lyke Jude Mmadunwobi empathized, explaining that recent windy weather had caused widespread internet problems in Germany.
- Internship and Job Market Discussion** Chinedu Kirian Onwuzuruike shared that they were finishing a DCI web development internship next month and were actively applying for jobs but only receiving rejections. Claudia dci_fbz_aws_ce_24_e05 suggested looking for internships to gain a foothold in companies, which Ikenna lyke Jude Mmadunwobi confirmed Chinedu Kirian Onwuzuruike was already doing.
- AI and Job Market Trends** Ikenna lyke Jude Mmadunwobi and Chinedu Kirian Onwuzuruike discussed the evolving job market, noting that many companies had not fully embraced AI, leading to fewer job opportunities currently. They expressed optimism that by 2027, more companies would upgrade to AI, increasing the demand for experts. Ikenna lyke Jude Mmadunwobi highlighted

that only 30% of companies globally were using AI, emphasizing the future potential and suggesting applying to Asian countries for jobs.

- **Remote Work and AI Adoption in Germany** Claudia dci_fbw_aws_ce_24_e05 confirmed that working remotely for foreign companies from Germany was possible, as long as taxes were paid. They added that Germany was somewhat behind in AI adoption compared to other countries. Cecilia Mwaniki shared an example of a robot in a German medical laboratory, highlighting its slowness and inability to fully replace human beings.
- **The Role of AI in the Future** Ikenna lyke Jude Mmadunwobi asserted that AI would not entirely replace humans but would require individuals to "prompt" or command machines. They emphasized that AI's accuracy and tireless nature made it valuable, predicting a future where AI and digital work would be the "next evolution". Chinedu Kirian Onwuzuruike agreed, mentioning that many job requirements now included AI experience.
- **Team Members' Origins** Claudia dci_fbw_aws_ce_24_e05 inquired about the team members' origins. Cecilia Mwaniki stated they were from Kenya, Ikenna lyke Jude Mmadunwobi and Chinedu Kirian Onwuzuruike confirmed they were from Nigeria, and Mariem Ghali was from Tunisia. The group joked about changing their group name to "African group five".
- **African Identity and Mentality** The team discussed the concept of African identity, with Ikenna lyke Jude Mmadunwobi asserting that anyone born and raised in Africa was African, regardless of ancestry or color. Claudia dci_fbw_aws_ce_24_e05 resonated with this, describing the "different vibe" and "more heart" of Africa compared to the "very cold" mentality often experienced in Germany.
- **Cultural Adaptation and Identity** Ikenna lyke Jude Mmadunwobi discussed the challenges of adapting to a new culture while maintaining one's identity after living in a foreign land for 18 years, noting that others expect them to change. Claudia dci_fbw_aws_ce_24_e05 supported this point, emphasizing that one cannot change who they are, especially if they grew up with a different culture, and shared their own experience of being straightforward which is not always well-received. Cecilia Mwaniki reinforced the idea that it is not easy to navigate these expectations, stating that one has to be themselves.
- **Classroom Dynamics and Recording Status** Chinedu Kirian Onwuzuruike pointed out that Ikenna lyke Jude Mmadunwobi was "always attacking" Cecilia Mwaniki,

to which Ikenna lyke Jude Mmadunwobi responded that their "offense" was being in the same class and group, and joked about Cecilia Mwaniki always asking them to turn their camera on while never doing so themselves. Chinedu Kirian Onwuzuruike also reminded the group that the meeting recording was still active as Cecilia Mwaniki noted the class was officially over. The participants then discussed how to confirm if others were still online before ending the session, exploring options to check other groups or rooms.

Suggested next steps

- ☐ Sara Hofmann and Naweed Zahed will check the LinkedIn API part to determine if they need to use the business API or an alternative like Appify, and ensure the workflow does not conflict with data protection and other policies.
- ☐ Ikenna lyke Jude Mmadunwobi will watch the videos this weekend to catch up with the content.
