Meeting Oct 29, 2025 at 15:40 CET

Meeting records  Recording

Summary

Clément Lacaille led a meeting with Claudia dci_fbz_aws_ce_24_e05, Chinedu Kirian Onwuzuruike, Cecilia Mwaniki, Mariem Ghali, and Louise Ndafudha Naayole Ludwig, addressing video download issues, critiquing workflow briefs for lack of detail and summarization, and providing guidance on enhancing workflow output with more parameters and an additional agent for reporting. The team collaboratively worked on refining the workflow's brief and system prompt, focusing on setting up nodes, integrating "publicity" output, and adding an OpenAI LLM node for summarizing reports. The main talking points were Clément Lacaille's guidance on refining the workflow, the team's collaborative efforts in implementing changes, and troubleshooting issues related to system prompts and node configuration.

Details

Notes Length: Standard

- **Meeting Kick-off and Video Download Issue** Clément Lacaille initiated the meeting, noting five attendees and requesting a status update from Shined Sicily or another leader. Claudia dci_fbz_aws_ce_24_e05 raised a question about downloading past classroom videos, stating a classmate experienced difficulty. Clément Lacaille confirmed the videos should be downloadable and adjusted settings to enable comment access, asking the classmate to re-check. Clément Lacaille later acknowledged the need to further change download settings, thanking Claudia dci_fbz_aws_ce_24_e05 for bringing it to their attention.

- Workflow Status and Initial Brief Review** Chinedu Kirian Onwuzuruike inquired about the status of the previous day's workflow, questioning if it was finished. Clément Lacaille requested to see the workflow, and Cecilia Mwaniki shared it, confirming it was saved from the 28th. When asked about its completion, Cecilia Mwaniki executed the workflow. Chinedu Kirian Onwuzuruike summarized that they learned to create an AI workflow that processes user input through a language model.
- Critique of Workflow Brief and Output** Clément Lacaille critiqued the workflow's brief, "Research latest activities of top workflow automations companies and summarize them for a 10-year-old," asking how it constitutes market research. They suggested making the brief more detailed by dividing it into categories like product, company type, and specific research questions. Clément Lacaille also pointed out the lack of a summary in the workflow's output, noting the search results were present but not summarized.
- Enhancing Workflow Detail and Reporting** Clément Lacaille instructed the team to make the output more detailed by thinking about how to obtain more data and then create a report from that raw data. They suggested adding another agent to generate a report, emphasizing the need for more parameters such as company details, customer segments, pricing, marketing, and distribution strategy. Clément Lacaille also outlined the need to summarize the entire output using an OpenAI node and then send it to an email or other destination, stressing that there was significant work to be done.
- Guidance for Workflow Refinement** Clément Lacaille provided specific instructions in the chat for refining the workflow: make the set node more detailed with specifics like product category, company type, and detailed company information (marketing, distribution). They then left to check on other breakout rooms, leaving the team to begin implementing the changes.
- Collaborative Workflow Adjustment Attempts** Chinedu Kirian Onwuzuruike and Cecilia Mwaniki collaboratively worked on refining the workflow's brief by adding fields for product category (e.g., "toys," "electronics," "e-scooter") and company type (e.g., "Amazon," "Media Markt") in the N8N set node. They also worked on including details required for the research, such as marketing strategies and distribution channels. Cecilia Mwaniki attempted to use Publicity and Gemini for guidance, with Chinedu Kirian Onwuzuruike suggesting they simplify requests for easier understanding.

- Addressing System Prompt Issues** Clément Lacaille returned and identified a mismatch between the workflow's brief (automation workflow) and the newly added specific details (toys, e-scooter). They explained that the brief should be consistent and specific, acting as a clear instruction for the research. Clément Lacaille then directed them to revise the system prompt in the perplexity node, noting that it lacked a detailed role, context, and task, and incorrectly used the brief as the system prompt. Clément Lacaille instructed them to ask Publicity for guidance on creating a proper system message for market research workflows.
- Setting up the Set Node** Clément Lacaille guided Cecilia Mwaniki through setting up a "set node" in their workflow. They explained that a "label" acts as a header for a data point, while a "string" is the value entered into it, comparable to a key-value pair. They advised using Gemini to get step-by-step instructions on configuring the node and linking it to "publicity".
- Collaborative Problem Solving** Clément Lacaille encouraged all team members, including Mariem Ghali, Claudia dci_fbw_aws_ce_24_e05, and Louise Ndafudha Naayole Ludwig, to participate and assist Cecilia Mwaniki and Chinedu Kirian Onwuzuruike in setting up the node. Mariem Ghali mentioned they were following along to understand, as they were not present in the previous session. Chinedu Kirian Onwuzuruike helped Cecilia Mwaniki by verifying the steps and confirming the data values for different fields like "brief," "Amazon," and "E-scooter".
- Configuring the System Message in Gemini** Clément Lacaille instructed Cecilia Mwaniki to refine the prompt in Gemini to specify the desired setup for the node. They clarified that the goal was to set up the node "as per the system message structure with a focus on research in a specific product category". They then further refined the prompt to instruct Gemini on the workflow: "When I type a research brief, I want publicity to do research on that specific product category. Not multiple things".
- Integrating Publicity Output** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike worked on incorporating the output from the "publicity" tool into the workflow. Clément Lacaille directed them to copy the JSON output from "publicity" and paste it into Gemini, then ask Gemini for guidance on summarizing the report using OpenAI.
- Adding the OpenAI LLM Node** The team then focused on integrating an OpenAI LLM node to summarize the "publicity" report. Chinedu Kirian Onwuzuruike

guided Cecilia Mwaniki to add an "OpenAI message model" node and to paste the previously copied system prompt into it.

- **Clarifying System and User Messages** Clément Lacaille paused the task to ensure the team understood the difference between system and user messages. They asked them to consult Gemini for a clear explanation, emphasizing that a system message defines the AI's behavior and persona, while a user message is the specific input or task provided to the AI at a given moment. Clément Lacaille clarified that the "publicity" output should be connected as a user message to OpenAI, and the system message should instruct OpenAI on how to summarize the content.
- **Finalizing the User Message** Cecilia Mwaniki and Chinedu Kirian Onwuzuruike continued to refine the user message for the OpenAI node. Chinedu Kirian Onwuzuruike suggested asking Gemini for the "perfect user message" that dynamically includes the "publicity" output. They eventually found and pasted a dynamic expression that pulls the output from the previous "publicity" node into the user message section, which successfully executed the step.
- **Individual Learning and AI Tools** Claudia dci_fbw_aws_ce_24_e05 and Cecilia Mwaniki discussed the need for individual practice to understand AI concepts, as they both felt lost and wanted to ensure they retained the information. Claudia dci_fbw_aws_ce_24_e05 expressed their intention to dedicate their weekend to catch up on the material, while Cecilia Mwaniki emphasized the importance of self-study for the concepts to sink in.
- **Meeting Recording Availability** Chinedu Kirian Onwuzuruike informed the group that the recording for the current week's session would not be shared on Slack, noting that this was the final week and everyone was working on their individual projects. Claudia dci_fbw_aws_ce_24_e05 questioned this, recalling that the main room was supposed to be recorded. Cecilia Mwaniki suggested that perhaps the recording was not needed because the focus was on individual projects.
- **Workflow Sharing and Duplication** Cecilia Mwaniki offered to share their workflow with the group, and Chinedu Kirian Onwuzuruike provided instructions on how to find and duplicate the "group five workflow" by searching for it and renaming the duplicated copy. This allowed team members to have their own editable version of the workflow.

- **Troubleshooting Workflow Steps** Louise Ndafudha Naayole Ludwig sought assistance from Cecilia Mwaniki to troubleshoot their workflow, particularly regarding copying system prompt messages and dragging fields into the user message section. They worked through the process of setting up the Perplexity account message model and later transitioned to configuring the OpenAI message model by copying specific prompts and ensuring the correct roles (system/user) were assigned.
- **Collaborative Debugging and Learning** Cecilia Mwaniki guided Louise Ndafudha Naayole Ludwig through steps like dragging brief, Amazon, and MediaMarkt fields into the user message, and changing the role to "user" for execution. Despite some technical difficulties in sharing screens simultaneously, Cecilia Mwaniki continued to provide instructions and support to Louise Ndafudha Naayole Ludwig, emphasizing the importance of understanding the concepts rather than just memorizing them.

Suggested next steps

- ☐ Clément Lacaille will change the settings to allow for the download of the classroom videos because a classmate is unable to download them.
- ☐ Cecilia Mwaniki will update the workflow brief set node to be more detailed with specifics like product category, type of companies, and details of the company.
- ☐ Cecilia Mwaniki and Chinedu Kirian Onwuzuruike will revise the system prompt in the Perplexity node to include a detailed role, context, and task for the AI.
- ☐ Cecilia Mwaniki will figure out how to link the set node's data with four or five different columns to Publicity using a message and complete this step by tomorrow.
- ☐ Cecilia Mwaniki will save and download the executed workflow after finishing for the day.
- ☐ The group will complete the last 40% of the workflow by tomorrow.
- ☐ Claudia dci_fbw_aws_ce_24_e05 will do the AI work over the weekend because she feels lost.
- ☐ Claudia dci_fbw_aws_ce_24_e05 will ask if DCI is recording the main room tomorrow and request a private copy for the group if so.
- ☐ Cecilia Mwaniki will do the AI tasks on her own for the material to sink in.
- ☐ Cecilia Mwaniki will share the workflow and look for the group's names in DCI.

- ☐ Cecilia Mwaniki will send the system prompt message on Slack because everything in the chat will be gone when the meeting closes.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

Please provide feedback about using Gemini to take notes in a [short survey](#).
